## Introduction

---

This report has been prepared in accordance with Commission Delegated Regulation (EU) 2015/35 and EIOPA Guidelines for Reporting and Publication.

The report describes the activities carried out in SEB Life and Pension Holding AB (“the Company”) and its subsidiaries that carry out insurance activities. The term “Insurance Group” is used for this group (unless otherwise stated).

There are some differences between the group concept of the solvency reporting and the group concept of the financial reporting according to the Annual Accounts Act’s Group Concept.

Gamla Livförsäkringsaktiebolaget SEB Trygg Liv (publ) (“Gamla Liv”) that is a subsidiary of SEB Life and Pension Holding AB operates in accordance with mutual principles. Gamla Liv does not pay dividends and the Company has no determinative influence on the design of Gamla Liv’s financial and operational business. Gamla Liv is therefore not consolidated in the SEB Life and Pension Holding Group or in the SEB Group in the financial statements.

The solvency reporting includes Gamla Liv and its subsidiaries with the deduction and aggregation method in the calculation of the Group-based Capital requirement and Own Funds. Other subsidiaries are included in the Group with the full consolidation method. The analysis of the Insurance Group’s risk profile and solvency position is performed excluding Gamla Liv. Gamla Liv’s Own Funds and Solvency Capital Requirement under Solvency II rules are significant in relation to the Group’s Own Funds and Capital Requirements. Gamla Liv is included only as shares in subsidiaries in the Insurance Group’s solvency balance sheet.

In accordance with transitional rules, older solvency rules of the Insurance Business Act (Solvency I) are applied to the occupational pension activities in Sweden for the two Swedish subsidiaries. The transitional rules are expected to be in place until and including 2022.

The Board of Directors of the Company has adopted this report on May 28, 2019. The Board has participated in the preparation of the report.

## Summary

---

This report contains information about the Insurance Group's Business and Performance, its Corporate Governance, Risk Profile, Own Funds and Solvency Capital Requirements for the reporting period 1 January to 31 December 2018. The report on Solvency and financial condition is also prepared separately for each subsidiary of the Insurance Group.

### **Business and performance**

The Insurance Group carries out life insurance and unit-linked insurance business mainly in the Nordic and the Baltic countries.

On January 1, 2018 the new IFRS 15 regulations came into force which resulted in a reduction of deferred acquisition costs (DAC) by SEK 2 billion in the financial reporting. However, the solvency reporting only includes DAC for the occupational pension and the negative effect on the Own Funds of the Insurance Group was SEK 1.4 billion.

In February 2018 it was decided to simplify the legal structure of the companies in Estonia, Latvia and Lithuania which is expected to take place in 2019.

On June 7, 2018, all shares in the Danish subsidiaries SEB Pensionsforsikring A/S ("SEB Pension Denmark") and SEB Administration A/S were sold. The buyer was Danica Pension Livsforsikringsaktieselskab which is a subsidiary of Danske Bank. The transaction resulted in a divestment gain in the Insurance Group amounting to SEK 3,548 million.

The Irish subsidiary announced in September 2018 that it will no longer write new insurance outside the Nordic and Baltics. However, the company will continue to provide full service to existing policyholders in the other markets.

Total assets under management including Gamla Liv were SEK 466 (613) billion at 31 December 2018 and the gross premium income amounted to SEK 29 (36) billion in 2018.

Operating profit for the Insurance Group according to the financial reporting was SEK 5,408 (2,421) million. The increase is due to the profit from the divestment of the Danish subsidiaries. Adjusted for the divestment gain, profit decreased by SEK 561 million which is mainly explained by a reduced contribution from the divested companies (SEK -541 million).

### **System of governance**

In the Company's capacity as an insurance holding company, the Board has adopted an instruction on the Insurance Group's system of governance. Through the instruction, the Company controls the elements that the system of governance should contain in the subsidiaries within the Insurance Group.

At the group level, there are three key functions: the Compliance function, the Internal Audit function and the Risk Management function. At the group level, the key functions primarily have a coordinating and supportive role regarding the key functions in the respective subsidiaries within the Insurance Group.

## **Risk profile**

The Insurance Group's business activities give rise to market-, counterparty-, underwriting- and operational risks. The two greatest risks expressed as Solvency Capital Requirement are life underwriting risk and market risk. During the autumn, a so-called Own Risk and Solvency Assessment ("ORSA") was carried out showing that there is a good balance between business strategy, risk profile and solvency position.

No material changes in Insurance Group's Risk profile have been made during the reporting period.

## **Valuation for solvency purposes**

The consolidated balance sheet has been prepared in accordance with IASB International Financial Reporting Standards (IFRS) of the European Commission. In the solvency balance sheet, assets and liabilities have been revalued in cases where Solvency II prescribes other valuation rules than IFRS.

The Insurance group's solvency balance sheet has been affected by the divestment of SEB Pension Denmark. The value of investment assets decreased significantly, as well as technical provisions compared to 2017.

No material changes in assumptions in the calculation of assets, technical provisions and other liabilities of the Insurance Group have been made during the reporting period.

## **Capital Management**

The Insurance Group's total Own Funds including Gamla Liv amounted to SEK 42,013 (50,805) million at the end of the reporting period.

The Solvency Capital Requirement (SCR) amounted to SEK 36,224 (43,234) million, giving a quota of 1.16 (1.18). The Insurance Group's Solvency Capital Requirement decreased by SEK 7,010 million or 16 percent during the reporting period. The decrease in SCR is attributable to decreased solvency capital requirements for the equity risk and that SEB Pension Denmark was sold during the year.

## **Significant changes after the reporting period**

The responsible person for the Compliance function at group level has been replaced.

# A Business and performance

## A.1 Business

### Overview according to the financial statements, SEK million

|  | 2018    | 2017    |
|--|---------|---------|
| Assets under Management (AuM), the Holding Group | 291,439 | 435,771 |
| Assets under Management (AuM) Gamla Liv          | 174,961 | 177,212 |
| Premiums gross, the Holding Group 1)             | 29,287  | 36,328  |
| Operating profit, the Holding Group 2)           | 5,408   | 2,421   |

1) In 2018, SEB Pension Denmark is included only during the first quarter in the Insurance Group's QRT reporting

2) In 2018, SEB Pension Denmark is included until the divestment

SEB Life and Pension Holding AB ("the Company") with registration number 556201-7904 is a Swedish insurance holding company with the task of streamlining capital supply and co-ordinating life insurance operations within the SEB Group. The Company's business mainly consists of the management of shares in subsidiaries. The Company is registered in Sweden and based in Stockholm. The Company's address is 106 40 Stockholm.

The Company is a wholly owned subsidiary of Skandinaviska Enskilda Banken AB (publ) ("SEB"), company number 502032-9081, Stockholm.

The Company has subsidiaries that operate life insurance and unit-linked insurance operations in Estonia, Ireland, Latvia, Lithuania and Sweden (Appendix 1, Form S.32.01). Together with the subsidiaries, the Company constitutes the SEB Life and Pension Holding Group and is consolidated in SEB's consolidated accounts.

The Company's internal organisation is established in an instruction adopted by the Board. In addition to the Board and the Managing Director, the Company's organisation consists of a management team.

### Supervisory Authority and external auditors

The Insurance Group's Supervisory Authority is Finansinspektionen, Box 7821, 103 97 Stockholm, e-mail: finansinspektionen@fi.se. Telephone +46 (0)8 408 980 00

The subsidiaries are supervised by the local supervisory authority of the respective country.

The Company's external auditors are PricewaterhouseCoopers AB ("PwC"), 113 97 Stockholm. The auditor appointed is Eva Fällén.

### Description of the subsidiaries

Gamla Livförsäkringsaktiebolaget SEB Trygg Liv (publ) ("Gamla Liv") operates traditional life insurance business. Gamla Liv has been closed for new subscriptions since 1997 and operates in accordance with mutual principals and with policyholders, through the Trygg-Stiftelsen, as an indirect decision-making party on issues essential to the business. Given that Gamla Liv does not pay dividends and that the Company has no controlling influence on the design of Gamla Liv's financial and operational activities, Gamla Liv is not consolidated in the Holding group or in the SEB Group in the financial statements. Solvency reporting includes Gamla Liv in the Insurance Group's own funds and Solvency Capital Requirement under deduction and aggregation method.

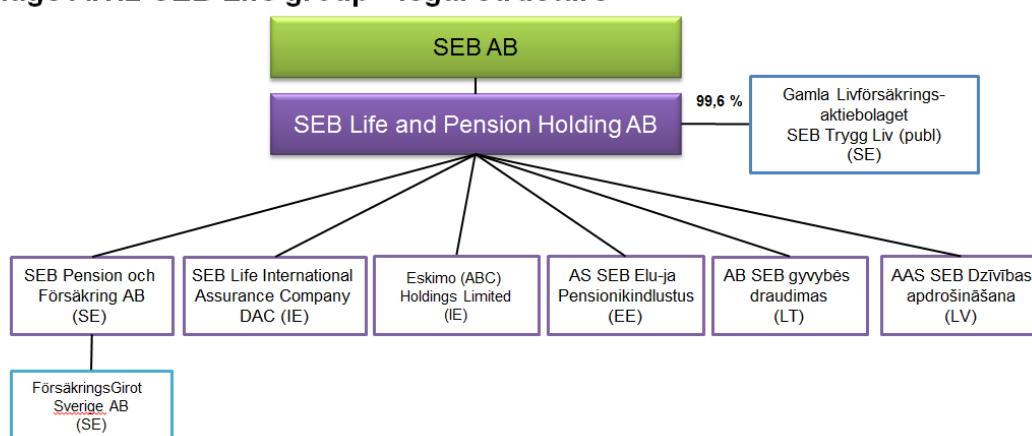

SEB Pension and Försäkring AB (“Pension & Försäkring”) operates both unit-linked insurance and traditional life insurance business. Pension & Försäkring also operates insurance administration for Gamla Liv. Pension & Försäkring owns 25 percent of FörsäkringsGiroet Sverige AB.

SEB Life International Assurance Company DAC (“Life International”) operates unit-linked insurance and is a life insurance company regulated and licensed in Ireland. The subsidiary Eskimo (ABC) Holdings Limited (“Life Eskimo”) is dormant and runs no business.

The three Baltic subsidiaries AS SEB Elu-ja Pensionikindlustus (“SEB Life, Estonia”), AAS SEB Dzīvības apdrošināšana (“SEB Life, Latvia”), and AB SEB gyvybės draudimas (“SEB Life, Lithuania”) operate unit-linked insurance as well as traditional life insurance which are profit sharing.

The Company has a branch SEB Life and Pension Holding AB Riga Branch (“Riga Branch”) in Latvia tasked with co-ordinating activities in the Baltic countries.

### Image A.1.2 SEB Life group - legal structure

### Intra-group transactions

Pension & Försäkring and Gamla Liv have an agreement, which means that Pension & Försäkring is mandated to carry out Gamla Liv’s insurance administration. The compensation amounted to SEK 120 (120) million during the reporting period.

For further information about outsourcing within the Insurance Group, refers to Chapter B.7.

The Company’s subordinated loan to SEB Pension Denmark was fully repaid by SEK 1,319 million in connection with the divestment of the company in June 2018. The receivable amount was SEK 1,265 million at 31 December 2017. SEB Pension Denmark also paid a dividend of SEK 1,901 (1,342) million.

During the reporting period the subsidiaries Pension & Försäkring and Life International also paid dividend amounting to SEK 1,000 (1,000) and SEK 154 (264) million respectively to the Company. Furthermore, during the year Pension & Försäkring submitted a group contribution of SEK 236 (264) million to the Company. At the end of the year, the Company reported a corresponding receivable because the amount is settled the following year.

## **Business segments and geographical areas**

The Insurance Group provides savings and risk insurance for companies, individuals and institutions in the Nordic and Baltic countries.

For the purposes of solvency, the Insurance Group's insurance obligations are divided into the following business segments:

- Insurance with profit participation
- Unit-linked and index-linked insurance
- Other life insurance
- Health insurance
- Medical expense insurance for non-life insurance
- Income protection insurance for non-life insurance

### **SEB Pension & Försäkring (Sweden)**

SEB Pension & Försäkring offers insurance solutions on the Swedish market within risk and unit-linked insurance and traditional life insurance. The insurance offer includes capital insurance, custody insurance, private pension insurance, occupational pension insurance, health insurance, group life insurance and health insurance. With a new range of traditional life insurance in Sweden, a wide range of products is offered.

### **Gamla Liv (Sweden)**

Gamla Liv operates traditional life insurance business and is closed for new subscription. The business essentially consists of two branches, defined-contribution traditional occupational pension insurance and individual traditional insurance. All policyholders are residents in Sweden.

### **SEB Life International (Ireland)**

SEB Life International announced in September 2018 that it would concentrate on SEB's main markets and no longer write new insurance outside the Nordic region. The company will continue to accept Nordic customers who can reside in different EU markets but will no longer accept new insurance from non-Nordic customers. However, the company will continue to provide full service to existing policyholders in non-Nordic markets. The company conducts most of its operations in Ireland, but also has branches in Luxembourg and Finland. Previously, there was also a branch in the UK, but it was closed by the end of 2018.

SEB Life International primarily offers life insurance products with a single premium whereby customers have the flexibility to manage their own investment portfolio of shares, funds and other financial instruments. From a Solvency II perspective, all products are classified as "Unit-linked Insurance and Index Insurance".

### **SEB Life Estonia**

SEB Life Estonia offers insurance solutions on the Estonian market in risk insurance, unit-linked insurance and life insurance with guarantees. The customers are mainly private individuals. Offered products include products for loan protection, term life, pension's products and annuities.

### **SEB Life Latvia**

SEB Life Latvia offers insurance solutions on the Latvian market in risk insurance, life insurance with guarantees and unit-linked insurance. Offered products include guaranteed and fund-linked capital insurance, life and accident insurance for private and corporate customers and loan protection and annuity product for private customers. Sales focus is on unit-linked insurance and risk insurance.

**SEB Life Lithuania**

SEB Life Lithuania offers insurance solutions on the Lithuanian market in risk and unit-linked insurance as well as traditional life insurance. Customers include private individuals, companies and organisations. The products include unit-linked insurance, annuity insurance, risk protection products, loan protection products and life insurance products. Sales focus is on unit-linked insurance and risk insurance.

**Significant events during the reporting period**

At the beginning of the year, a decision was made to consolidate the life insurance operations in the three Baltic companies in the Latvian company with branches in Estonia and Lithuania. Through coordinated governance and operations, new services will be offered to customers in a more efficient manner. It was also decided to close-down the Company's branch in Riga. The change is expected to be completed during the second half of 2019.

On June 7, the Danish subsidiaries, SEB Administration A/S and SEB Pensionsforsikring A/S, were sold to Danica Pension in Denmark. The sales price amounted to SEK 6,878 million. In connection with the sale, the Danish companies paid a dividend of SEK 2,116 million. Furthermore, a subordinated loan of SEK 1,319 million was repaid. The consolidated divestment gain amounted to SEK 3,548 million.

**A.2 Underwriting performance****Table A.2.1.**

| SEK million  | 31 Dec 2018  | 31 Dec 2017  | Change %    |
|--|--------------|--------------|-------------|
| Income investments contracts                               | 3,371        | 3,453        | -2          |
| Income insurance contracts                                 | 966          | 1,600        | -40         |
| Gains from the sale of subsidiaries                        | 3,548        | -            | -           |
| Other Income   | 115          | 172          | -33         |
| <b>Total income, gross</b>                                 | <b>7,999</b> | <b>5,225</b> | <b>+53</b>  |
| Distribution expenses including deferred acquisition costs | -962         | -964         | -0          |
| Operating expenses   | -1,629       | -1,840       | -11         |
| <b>Operating profit</b>                                    | <b>5,408</b> | <b>2,421</b> | <b>+123</b> |

During 2018, SEB Pension Denmark is included until May

In the Insurance group's financial reporting, the impairment of deferred acquisition costs in accordance with IFRS 15 has been reported directly over equity 2017.

The Insurance group's operating profit according to financial reporting increased from the previous year as a result of a profit on the sale of the Danish subsidiaries. Adjusted for the divestment profit, profit decreased by SEK 561 million, which is mainly explained by a reduced contribution from the divested companies (SEK -541 million).

Tables A.2.2 and A.2.3 shows the Insurance Group's premiums per country and per line of business.

**Table A.2.2 Premiums gross per country**

| <b>SEK million</b> | <b>2018</b>   | <b>2017</b>   |

| Expenses *) | -230                  | -2,558           | -27,725                          | -85                   | -258                      | -17              | <b>-30,871</b> |

| <b>2017</b> | <b>Life insurance</b> |                  |                                  |                       | <b>Accident insurance</b> |                  | <b>Total</b>   |
|-------------|-----------------------|------------------|----------------------------------|-----------------------|---------------------------|------------------|----------------|
|             | <b>SEK million</b>    | Health insurance | Insurance with bonus entitlement | Unit-linked insurance | Other life insurance      | Health insurance |                |
| Premiums    | 655                   | 7,256            | 27,846                           | 250                   | 289                       | 31               | <b>36,328</b>  |
| Expenses *) | -557                  | -5,948           | -28,762                          | -250                  | -259                      | -12              | <b>-35,789</b> |

\*) Expenses include operating expenses and claims incurred

The decrease in premiums and expenses compared with the previous year is due to that SEB Pension Denmark is included in the Insurance Group only during the first quarter 2018.

### A.3 Investment performance

The Insurance Group's total assets under management (including unit-linked insurance capital) amounted to SEK 291 (436) billion as of 31 December 2018, a decrease of 33 percent compared with the same period last year. Adjusted for the divested operations in Denmark during the year (which included SEK 133 billion in 2017), the decrease was SEK 12 billion or 4 percent. The downturn took place during the last quarter when the world's stock exchanges fell sharply.

The Insurance Group's total investment performance is shown per asset class in Table A.3.1. The largest negative return is attributable to fund units that are included in the unit-linked insurance portfolio, which is explained by the fact that the world's stock markets fell sharply in the last quarter.

The Insurance Group has no gains or losses recognised directly against equity.

The Company doesn't invest directly in Investments in securitization.

**Table A.3.1 Investment performance**

| Asset class, SEK million | 2018           | 2017          |
|--------------------------|----------------|---------------|
| Equities                 | -829           | 1,886         |
| Fund units               | -11,152        | 5,494         |
| Properties               | 380            | 131           |
| Corporate bonds          | -978           | 573           |
| Cash and deposits        | 231            | -22           |
| Mortgage bonds           | 22             | 94            |
| Government bonds         | 6              | 39            |
| Structured securities    | 29             | 204           |
| Secured securities       | -11            | -6            |
| Derivatives              | -1,664         | 6,741         |
| <b>Total</b>             | <b>-13,966</b> | <b>15,134</b> |

### A.4 Performance of other activities

Other major income and expenses during the reporting period mainly relate to insurance administrative services between Pension & Försäkring and Gamla Liv. For the reporting period, the compensation was SEK 120 (120) million.

All leases within the Insurance Group refer to operational leasing. All subsidiaries have leases for their offices in each country. In addition, there are lower value leases such as garage spaces, telephones, computers and other office equipment.

## **A.5 Any other information**

During the year, a new portfolio system "Simcorp Dimension" was implemented within Gamla Liv. Other subsidiaries within Insurance group implemented the same system during 2017. This new system contributes to a more efficient Solvency II reporting process.

## **B System of governance**

### **B.1 General Information on the system of governance**

#### **The Company's administrative and management structures**

The Company's highest decision-making body is the shareholders' meeting with a number of formal tasks, as regulated in law and articles of association, such as the election of the auditor.

The Company's management bodies consist of its board of directors and Managing Director. The Board has decided on the Company's organisation by an Instruction regarding the Company's organization and activities.

The Board is responsible for the Company's organisation and the management of the Company's affairs. The Board consists of three members. The Board has appointed a Managing Director to handle the daily running of the Company. In order to clarify the Managing Director's duties in relation to the Board, the Board has adopted an Instruction regarding the Managing Director which indicates the duties of the Managing Director.

In the Company's capacity as an insurance holding company, the Board has adopted an instruction on the Insurance Group's system of governance. Through this instruction, the Company manages the elements of the system of governance that should be present at all subsidiaries within the Insurance Group. The Company's Board has furthermore adopted instructions on, for example, key functions, risk and internal control which are to be implemented throughout the Insurance Group through decisions in the administrative, management or supervisory bodies of each Insurance company.

The Company monitors the business of the Insurance Group through ongoing reporting from the subsidiaries to the Board and the Managing Director.

#### **Key functions**

The Company has three key functions: the Compliance function, the Internal Audit function and the Risk Management function (within the Company called the Risk function). The activities of the key functions are governed by specific instructions adopted by the Board. Through the Board instructions, the Board has provided the key functions with the necessary powers and operational independence to fulfil their commitments.

The Company's Compliance function primarily has a co-ordinating and supporting role regarding the compliance functions that exist in the respective subsidiaries of the Insurance Group. The Company's Compliance function also monitors the development of various external regulations. The Compliance function reports to the Board and the Managing Director.

The Company's Internal Audit function primarily has a co-ordinating and supporting role regarding the internal audit functions that exist in the respective subsidiaries of the Insurance Group. The function shall also assist the Company's Board with investigations deemed to require internal audit expertise. The scope of such investigations is determined by the function taking into account available resources and the impact on audit activities in other areas. The internal audit function reports to the Board.

The Company's Risk function primarily has a co-ordinating and supporting role regarding the risk functions that exist in each of the subsidiaries of the Insurance Group. The function is furthermore responsible for developing a group-wide risk management structure and monitoring its implementation within the Insurance Group. The Risk function reports to the Board.

## Material changes in the system of governance

During the reporting period, the person responsible for the Risk function has been replaced due to new employment. The chair of the board of the Company has also been replaced because the former chair left the SEB Group.

## Company principles and practice regarding remuneration

The Company's board of directors has adopted an instruction regarding remuneration that applies to all employees. The Instruction shall be implemented within the entire Insurance Group through decisions in the respective insurance company's administrative, management or supervisory body. The Instruction aims to attract and retain talents and strengthen a culture that rewards results and behaviours' that ensure sound risk management and sustainable long-term value creation in line with the interests of customers and shareholders. The basis for the remuneration structure rests on three main components: fixed remuneration, profit share programme and pension and other benefits. The executive management and certain other senior executives and key personnel may also be covered by the SEB Group's long-term share-based programmes. The goal is for the Company's staff to have an appropriate balance between fixed and variable remuneration.

Within the SEB Group, Group-wide equity-based programmes are used. The programmes are described in SEB's Annual Report, note 8 d. The Annual Report is available on the web: <https://sebgroup.com/investor-relations/reports-and-presentations/financial-reports/2018/annual-report-2018>

Employees within the SEB Group do not receive additional remuneration for their board assignments. In 2018, the board member of the Company who is not employed within the SEB Group was granted a fee for his assignment as a member. Board members who are employees of the SEB Group and persons responsible for key functions can, as key persons, be offered premium-based supplementary pensions and, like other employees within the Group, may also have the option of going into early retirement from the age of 62 according to the applicable collective agreements in the financial industry.

The company's Managing Director is employed by the subsidiary Pension & Försäkring, which pays the Managing Director's salary. The Company bears a share of the costs incurred. See the Annual Report for Pension & Försäkring, note 49, for more details. The annual report is available on the web: <https://sebgroup.com/sv/om-seb/vilka-vi-ar/organisation/vara-divisioner/livforsakringsverksamheten/arsredovisningar-och-rapporter-om-solvans-och-finansiell-stallning>

## B.2 Fit and proper requirements

### Special requirements for competence, knowledge and expertise

The Company's Board has adopted an Instruction regarding the fit and proper assessment. The instruction contains requirements for both fitness and probity and sets out the Company's process for the fit and proper assessment. The Instruction is to be implemented throughout the Insurance Group by decisions made by the management, supervisory or supervisory bodies of each subsidiary.

According to the instruction, everyone in the Company must have appropriate qualifications, experience and knowledge based on their duties. In terms of Board members and the Managing Director, it also states that they should have appropriate qualifications, experience and knowledge from the insurance sector, other financial sectors or other industries. In addition, the Managing Director must have relevant accounting knowledge and relevant leadership skills.

In terms of probity, it follows from the instruction that everyone in the Company should have a good reputation. When assessing whether a person meets the requirements for a good reputation, consideration should be given to the person's integrity and financial circumstances based on relevant information about the person's personality, personal conduct and reputation, as well as possible criminal, financial and supervisory aspects. The assessment also takes into account potential conflicts of interest and the role of the person within the Company.

### The process of a fit and proper assessment for persons in key positions

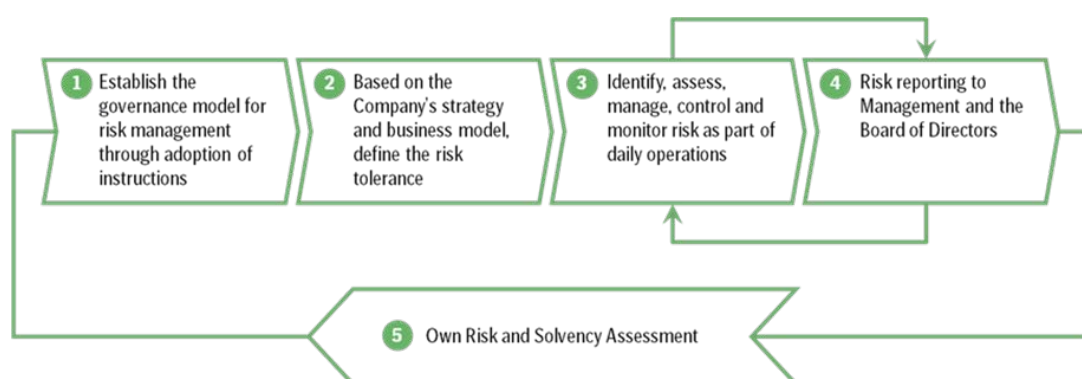

Prior to an employment with the Company, the Company applies a SEB group-wide regulatory framework for screening. The basic screening, which applies to everyone, includes identity checks, checks on grade sheets and certificate of education, references, credit information, extracts from the register on criminal acts and random drug tests. An extended screening, which applies to Managing Directors and other persons in key positions means that the background of the person is checked for a number of years in the past and checks are made of court disputes and the person's media exposure.

An employee's qualifications and reputation will then be assessed by the immediate manager at annual employee interviews.

## B.3 Risk management system including the own risk and solvency assessment

The Insurance Group's business activities give rise to underwriting risk, financial risks, operational risks and business risks. Image B.3.1 shows the components that form the risk management system of the Group and each subsidiary.

**Image B.3.1 Risk management system**

### Governance model for Risk Management

The Company's Board and CEO annually establish the guidelines that apply to risk management, risk reporting, internal control and follow-up within the Insurance Group. This is done by adopting an instruction regarding risk, an instruction regarding capital and own risk and solvency assessment as well as an instruction on internal control. These instructions are then adopted by the Board of each subsidiary with some local adjustment.

In addition, each subsidiary has more specific instructions and guidelines which define the risk management for each risk category in more detail. Examples of this are investment guidelines

that govern the management of financial risks and insurance guidelines that govern the management of underwriting risks.

The Company's risk function primarily has a co-ordinating and supporting role regarding the risk functions that exist in each of the subsidiaries of the Insurance Group. The function is further responsible for following up and monitoring the implementation of the group-wide risk management structure and reporting any material deviations to the Company's Board.

In addition, monitoring of the Insurance Group's internal control and compliance is done through the work performed by the Company's independent control functions Compliance and Internal Audit.

### **Risk tolerance and solvency need**

The Company's Board annually establishes the Insurance Group's tolerance of risk by adopting a so-called "Risk tolerance statement".

The overall tolerance of risk is defined by a solvency tolerance level which is set to avoid a situation where the ratio of Own Funds to its statutory Solvency Capital Requirement is at a level that adversely affects the Insurance Group's ability to achieve its business goals in the short and long term. In addition to a minimum tolerance level for the solvency ratio, the Board has also defined an internal target for the solvency ratio aimed at ensuring that there is enough time to implement appropriate measures in an orderly manner if a negative scenario develops which has not been anticipated in the business plan nor taken into account in the financial plan.

Within each subsidiary there are also defined risk measures per risk category, which are monitored continuously in order to ensure that the business is conducted within the framework of established risk tolerance. Examples are the maximum accepted loss on stress testing of current assets and liabilities (market risk), difference in modified duration between assets and liabilities (market risk), technical risk result in relation to premiums (underwriting risk), and operational losses (operational risk).

The derivation of the tolerance level and the desired solvency level is an activity that is part of the ORSA process which takes the following perspectives into account:

- The insurance group's risk profile and sensitivity to changes in the world at large
- The effectiveness of available measures that can be used to strengthen the solvency position
- Long-term financial stability
- Potential deficiencies in the models used for forward-looking assessments and data quality regarding inputs used in these models

Furthermore, the tolerance of risk per risk category is defined in qualitative terms and, at subsidiary level, through quantitative limits.

The Company's risk function continuously monitors that business is conducted within defined levels of tolerance risk and it reports any deviations to the Board and the CEO.

### **Risk management principles**

The following risk management principles are common to the subsidiaries within the Insurance Group.

Underwriting risks are managed through risk assessments, underwriting limits and by using prudent assumptions in premiums and in calculating technical provisions as well as through reinsurance.

The management of the financial risks is determined by investment guidelines in each subsidiary, which are adopted by the Board. Investment guidelines indicate the companies' financial risk profile, strategic asset allocation, risk budgets and financial risk management organisation. Furthermore, the financial risks are monitored through simulations of historical financial crises and analyses of historical portfolio variances. A considerable part of the Insurance Group's business is unit-linked insurance where the companies do not carry a direct financial risk because the policyholder is responsible for the investment risk. However, revenues from unit-linked insurance mainly consist of fees based on the value of fund units and are therefore affected by the value development of the funds.

Operational risks are managed primarily through a clearly distributed responsibility for processes, internal controls and well-functioning system support. There are also procedures for crisis management, business continuity planning, incident reporting and quality routines for the introduction of new products and processes. Furthermore, the subsidiaries carry out ongoing exercises aimed at identifying significant operational risks in different parts of the business. In cases where risk management is not considered sufficient, necessary improvement measures are identified.

Business risks, including strategic risks, are handled in the context of business planning and in the ongoing follow-up of operations. Business planning is based on, among other things, competitor and world surveillance, analyses of developments in the insurance market and analysis of proposed changes in legislation and regulations and how these can affect the business model.

Further information about the Insurance Group's risk management, risk exposure and sensitivity to risks are set out in section C. Risk profile.

## **Reporting of risk**

The aggregate risk position of the Insurance Group is reported by the risk function to the Company's Managing Director and Board at all board meetings. The risk report contains an overall analysis against the established risk tolerance, as well as sections per risk category describing risk exposure more in detail.

In addition, the risk function is responsible for escalation and reporting to the Company's CEO and Board if business is conducted outside the defined risk tolerance.

## **Own Risk and Solvency Assessment (ORSA)**

Within the framework of the ORSA process, the business plan is analysed from a risk and solvency perspective. The overall objective is to evaluate whether identified risks and capital requirements are acceptable and manageable or whether the strategy should be reviewed to balance the risk profile in relation to the ability to manage risks and the financial position of the Insurance Group.

The ORSA process is carried out annually, but if there are significant changes in the Insurance Group's risk profile, the Company will evaluate whether there is a need to initiate a non-regular ORSA. Examples of events that could potentially involve a significant change in the risk profile are major adjustments to the business model or strategy such as launch of new products, material changes in the current investment strategy, dividend policy or similar.

The instruction regarding capital and the own risk and solvency assessment, adopted by the Board, stipulates that the Insurance Group's capitalisation should be risk-based and forward-looking. The ORSA process is designed to fulfil this purpose and is structured around the following activities:

- 1) Establish the business strategy and identify significant risks

- 2) Evaluation of the suitability of the standard formula
- 3) Prognosis of the financial position based on the business plan
- 4) Define stress scenarios
- 5) Prognosis of the financial position based on stress scenarios
- 6) Analyse the result of stress scenarios
- 7) Evaluation of solvency requirement
- 8) Review and approval of the ORSA report
- 9) Communicate ORSA results to interested parties

## **B.4 Internal control system**

### **Description of internal control system**

All subsidiaries in the Insurance Group have implemented customised internal control systems in order to achieve business efficiency, to ensure reliability in internal and external reporting and to support compliance with external regulations and internal guidelines.

The internal control system of each subsidiary is structured around the following five components, which are further explained below: Control Environment, Risk Assessment, Control Activities, Information and Communication as well as Monitoring.

#### **Control Environment**

The control environment is defined by the corporate culture of the Insurance Group and each subsidiary and the overall attitude communicated by senior executives regarding the internal control system and its importance.

Examples of important components that contribute to a good control environment are clear division of responsibilities and continuous skill development for employees.

#### **Risk Assessment**

Each subsidiary continuously conducts various risk assessment activities in order to identify risks that need to be managed within the internal control framework. Examples of risk assessment activities are regular review of significant processes, the New Product Approval Process and analysis and follow-up of operational incidents.

#### **Control Activities**

Each subsidiary has defined control activities in order to create a structure that effectively addresses identified risks. The control structure includes both manual and automated controls and is documented in control catalogues per unit or in some similar way.

#### **Information and communication**

The Information and Communication component supports the other components within the framework and includes, for example:

- Compulsory education about internal instructions
- Discussions at group and unit levels about the respective control directories
- Various workshops on operational risks/internal controls facilitated by the risk function

All subsidiaries also have procedures for escalation such as whistle blower functionality.

### **Monitoring of control effectiveness within each subsidiary**

In order to ensure that the internal control system is effective over time, each subsidiary has implemented suitable monitoring activities linked to defined control responsibilities.

- Regular follow-up of key risk indicators such as outstanding reconciliation differences, etc.
- Self-assessment of control effectiveness initiated by the risk function
- Random sampling performed by compliance
- Random sampling performed by internal audit
- Random sampling performed by external audit

The result of the monitoring activities, i.e. if the internal control system is effective or if improvements are necessary, will be presented to management and the Board as part of the regular risk reporting as well as in the form of compliance and audit reports.

### **Monitoring of control effectiveness from the perspective of the Group**

The Company's key functions (Risk Function, the Compliance Function and Internal Audit) all take note of the reporting from the key function of each subsidiary including results from monitoring the effectiveness of internal control systems. This information is then consolidated in reports on the Insurance Group which are presented to the Company's management and Board.

### **The Compliance Function**

The Company and its subsidiaries have a separate compliance function (the Compliance Function) whose role and responsibility are stated in special instructions adopted by the Board in each company.

The Compliance Function's responsibility covers mainly the following regulatory areas:

- Business regulation and Permit issues
- Consumer Protection
- Market Conduct
- Prevention of money laundering and terrorist financing

The main tasks of the Compliance Function are:

- Managing compliance risks
- Monitoring
- Investigate incidents
- Provide advice on compliance issues and application of rules
- Develop internal rules on compliance
- Educate and inform
- Relationship with authorities

The Compliance Function is independent in relation to the Company's business and reports to the Managing Director and the Board. The Compliance Function shall be provided with full access to materials, staff and property relevant to the performance of the function's duties and all employees are required to co-operate fully with the Compliance Function. Any limitation of this right shall be reported to the Board and the Managing Director.

The Compliance Function annually establishes a written compliance plan to be approved by the Board. The plan describes activities for the coming year. In addition, the Compliance Function must provide a written report annually summarising the compliance work carried out during the past year and the outcome of the work.

The Compliance Function attends board meetings and management team meetings when dealing with compliance issues.

The Compliance Function co-ordinates its activities with the internal audit function and risk management function to ensure an appropriate distribution of activities and minimise duplication.

The subsidiaries in the Baltics have outsourced the Compliance Function to SEB and this is performed by SEB's Compliance Function in each country.

## **B.5 Internal audit function**

The Company's Internal audit function is provided by Pension & Försäkring. The Internal audit function is independent in relation to the business activities. The function maintains its independence and its objectivity from the business it reviews by not participating in the Company's operational activities and by adhering to the Board's instruction on the function and The Institute of Internal Auditor's Standard according to the International Professional Practices Framework. The Internal Audit Function further decides independently of its audit activities.

## **B.6 Actuarial function**

The Company has no actuarial function. Actuarial competence and coordination are, however, provided by Pension & Försäkring. Within the Insurance Group there are instead actuarial functions within each subsidiary.

## **B.7 Outsourcing**

The Board has adopted an instruction on outsourcing which will be implemented by the subsidiaries in the Insurance Group. The instruction specifies the conditions under which such arrangements may be made and how the process of outsourcing the business is to be carried out. The instruction states that critical or important operational functions should not be outsourced if it leads to:

- a significant deterioration of the quality of the system of governance,
- a significant increase in the operational risk,
- a deterioration of the supervisory authorities' ability to exercise supervision, or
- inability to maintain the ability to provide customers with satisfactory and continuous service.

The instruction further specifies what is to be governed by the agreement to be concluded between the client and the service provider. In summary, the requirements mean that the roles and responsibilities of the client or service provider are specified, that the client should be entitled to information about the performance of the services, that the service provider must co-operate with the supervisory authority and allow the supervisory authority access to the supplier's premises, that the service provider must protect confidential information that the service provider must establish, implement and maintain a catastrophe plan that the service provider must undertake to comply with applicable laws and regulations as well as instructions from the client and that the service provider's staff shall meet the client's eligibility requirements.

### **Material group-internal outsourcing**

The subsidiaries within the Insurance Group mainly have the following material internal outsourcing. In all cases, the supplier is SEB or another company within the SEB Group.

#### **Table B.7.1**

| <b>Description</b>   | <b>Country</b>               |
|--|------------------------------|
| Asset Management and Administration  | Sweden                       |
| Services to prevent money laundering and terrorist financing   | Sweden and Latvia            |
| IT services mainly include application management services, network and internet services, workplace-related services, support services, management and operation of development and testing environments, system development services | Sweden, Latvia and Lithuania |
| Risk control services  | Sweden                       |

Gamla Liv has also outsourced its insurance administration to Pension & Försäkring.

For more detailed information about outsourcing within the various insurance companies, refer to the solvency and financial condition report of each subsidiary.

## **B.8 Any other information**

The Insurance group has no other material information to provide regarding the system of governance.

## C Risk profile

The Insurance Group's business give rise to underwriting risks (life risk and health risk), market risks, counterparty risks (credit risks), liquidity risks, operational risks and business risks. The two greatest risks expressed as Solvency Capital Requirement are market risk and life underwriting risk, which is shown by the diagram below (in SEK million).

**Figure C.1 Capital requirement per risk module, 31 December 2018**

### C.1 Underwriting risk

The Insurance Group is exposed to underwriting risks through its subsidiaries.

Underwriting risk is the risk of loss or adverse changes in the value in technical provisions due to incorrect assumptions regarding mortality risk, longevity risk, health/disability risk, lapse risk, expense risk and catastrophe risk.

Underwriting risks are managed by underwriting guidelines in terms of risk assessment, through reinsurance, appropriate product design and pricing and by diversification of underwriting risks through a spread over a large number of insurance contracts. In addition, the outcome of underwriting risks is continuously monitored. Each subsidiary has defined risk tolerance levels for these risks and the limits established are monitored by each subsidiary.

The Insurance Group calculates the exposure of underwriting risks according to the Solvency Capital Requirement of the standard formula under Solvency II.

#### Mortality risk

Mortality risk is the risk of loss or adverse changes in the value of technical provisions due to the fact that the actual mortality of the life assureds, are higher than the subsidiaries have assumed in their pricing or in their assumptions in determining the technical provisions.

The exposure of each subsidiary to mortality risk is limited by applying underwriting guidelines to ensure that the products are priced in correspondence with the life assured's health status and further by limiting the insurance amounts through reinsurance.

#### **Longevity risk**

Longevity is the risk of loss or adverse changes in the value of technical provisions due to the fact that the life assureds live longer than the subsidiaries each have assumed in their pricing or in their assumptions in determining the technical provisions.

The exposure of each subsidiary to longevity risk is limited by using careful assumptions for remaining life. Assumptions on future mortality include trends with a gradually longer life expectancy and are based on both internal and external data.

#### **Health/disability risk**

Health/disability risk of loss or adverse changes in the value of technical provisions due to the fact that the actual rate of disability of the insured is higher than the subsidiaries each have assumed in their pricing or in their assumptions in determining the technical provisions.

The exposure of each subsidiary to the risk of illness is limited by applying underwriting guidelines to ensure that the products are priced in correspondence with the insured's health status and further by limiting the insurance amounts through reinsurance.

#### **Lapse and expense risk**

Lapse risk is the risk of loss or adverse changes in the value of technical provisions due to the fact that policyholders cease to pay premiums, surrender, transfer or change the insurance contract in a way that the subsidiaries have not predicted in their pricing or in their assumptions when determining the technical provisions.

Expense cost risk is the risk of loss or adverse changes in the value of technical provisions due to the fact that the actual operating costs are higher than the subsidiaries each have assumed in their pricing or in their assumptions in determining the technical provisions.

Lapse or expense risk risks are managed through appropriate product design and pricing and by a regular follow-up of outcomes against assumptions. In practise:

- The insurance premium shall be set to cover future expected costs and expenses of the insurance contract.
- A product profitability analysis, including sensitivity analysis, shall be performed and compiled on a regular basis.
- Previously paid commission shall, as far as possible, be recovered in the event of premium lapses or similar.
- Regular follow-up of expense levels, and initiation of activities to further improve efficiency in the Company's operations.

#### **Concentration of risk**

The Insurance Group has only limited exposure to concentration of risk in terms of underwriting risk.

#### **Reinsurance**

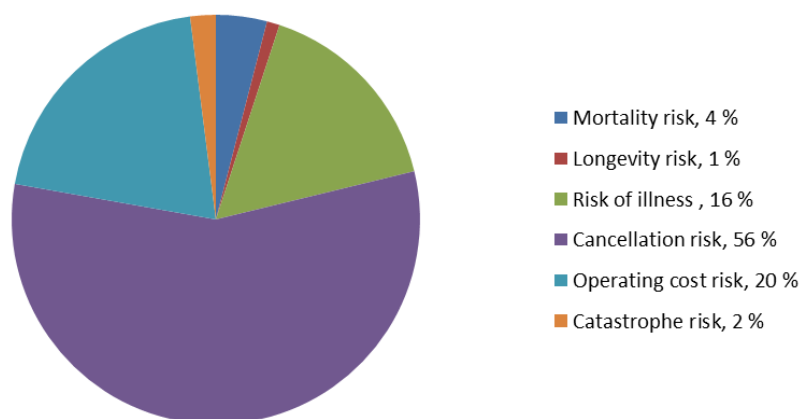

Reinsurance is used at each subsidiary in order to limit exposure to mortality risk and health/disability risk. The reinsurance arrangements may differ between the subsidiaries but usually include protection through retention limits for individual risks and for cumulative claims (catastrophe claims).

The reinsurers are carefully selected and take into account the credit rating, competence, experience, solvency and service level of the counterparty.

The reinsurance programmes are evaluated continuously, inter alia in order to evaluate their effectiveness, and the actuarial function of each subsidiary submits an opinion on the appropriateness of reinsurance programmes to the Board at least once a year.

### Life and health underwriting risks - Solvency capital requirement per typ of risk, 31 December 2018

## C.2 Market risk

The Insurance Group is exposed to market risks through the investments linked to traditional life assurance and risk insurance operations at each subsidiary, as well as through investments of own equity.

In order to maintain a good balance between risk and return, each subsidiary has defined risk tolerance levels as well as strategic asset allocation per investment portfolio. Fixed limits are continuously monitored by the respective risk function, which also daily monitors how the market risk exposure has developed through, for example, Value-at-Risk calculations as well as historical scenario analyses.

In terms of unit-linked insurance, the Insurance Group does not carry the direct market risk because the policyholder is responsible for the investment risk. However, the income from unit-linked insurance to a large extent comes from fees for assets under management based on the value of fund units and is therefore affected by the fund's value development.

### Risk exposure in terms of market risk

The main market risks the Insurance Group is exposed to is equity risk, interest rate risk, property risk, spread risk and currency risk.

Equity risk is the risk that the market value of equity investments will fall due to market and socioeconomic factors.

The Insurance Group is exposed to interest rate risk through the risk that the market value of assets carrying interest will decrease as interest rates rise. Interest rate risk increases with the

maturity of the asset. Furthermore, there is a risk of interest rate exposure linked to the policyholders being entitled to guaranteed insurance sums and that technical provisions for life insurance are discounted at projected market rates.

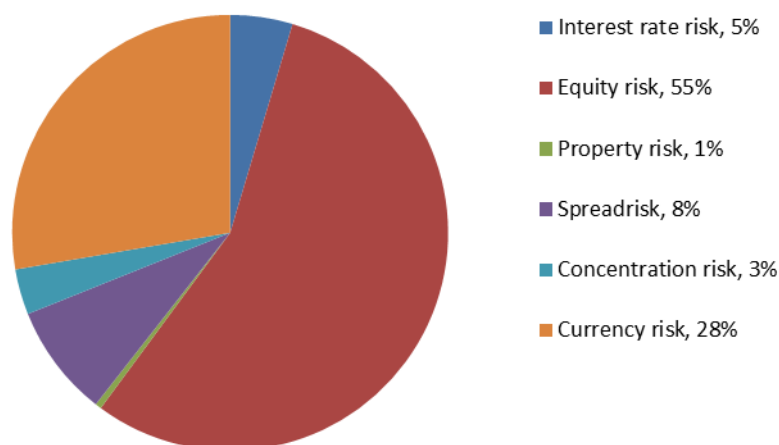

Property risk is the risk that the market value of the property portfolio will fall due to market and socioeconomic factors.

Spread risk arises when investing in investments in instruments such as corporate bonds and mortgage bonds and symbolises the risk premium over the risk-free interest rate.

Currency risk arises in the Insurance Group by the subsidiaries operating in local currency, which differ from the group's currency. The subsidiaries investments may involve currency positions in relation to the currency of the Group. Furthermore, there is a currency risk exposure within the Company as the shares in subsidiaries are reported in Swedish kronor while the subsidiaries' equity is in local currency. (However, this risk is mostly managed through currency hedging.)

The Insurance Group calculates the exposure of market risks according to the Solvency Capital Requirements of the standard formula under Solvency II.

**Figure C.2 Market risk - Solvency capital requirement per type of risk, 31 December 2018**

### Prudent person principle

The Boards of each subsidiary have defined investment guidelines, or similar steering documents, in accordance with prudent person principle. The following general principles apply to all subsidiaries in the Insurance Group:

- Investments should always be based on the policyholders' best interests and any conflicts of interest associated with the investment should always be evaluated and managed, especially regarding investments in securitised instruments.
- The portfolio's security, availability, liquidity and profitability shall be continuously analysed, evaluated and managed, compared against commitments and other management requirements.
- There must always exist a good picture of the purpose of the investment as well as understanding and knowledge about the investment's characteristics risk and return profile in isolation and how the portfolio as a whole is influenced by investment).

- Ensuring that all investments can be managed, valued and followed up in relevant systems and that sufficient expertise and experience exists to manage and administer the investment.
- Ensuring that the return on investment and risk, including solvency requirements, can be calculated and reported correctly.
- When using derivatives, it must be ensured that the exposure of the derivative reflects the underlying asset and that the expected risk transfer is achieved and that new risks arising from the use of derivatives are analysed and handled.

### **Material risk concentrations relating to market risk**

For maximum exposures to specific geographic markets, instrument types and individual counterparties, these are regulated and limited within the framework of the investment guidelines of each subsidiary

The Insurance Group's traditional portfolios are highly diversified. The greatest concentrations, apart from shares in well-diversified funds, are bonds with high creditworthiness.

The operational organisation regarding investments is partly co-ordinated with a joint Investment Manager and there is co-operation between the subsidiaries in the preparation of investment plans etc. However, the management and Board of each subsidiary own the final approval of the strategic asset allocation, risk tolerance and specific investments in each portfolio.

### **Risk reduction in terms of market risk**

The steering and risk reduction regarding market risk is determined by the investment guidelines adopted by the Board of respective subsidiary.

Equity risk is primarily managed through diversification across several markets and sectors which helps reduce the risk of individual factors impact on the equity portfolio of each subsidiary and the aggregated exposure for the Insurance Group.

As the Insurance Group's portfolios consist largely of interest-bearing assets and the technical provisions are largely discounted at market rates, the analysis of the interest rate sensitivity of the assets and liabilities is central to the asset management of respective subsidiary. Examples of measures to balance these risks are interest rate immunisation programmes where derivatives are used to limit unwanted outcomes due to changes in market interest rates.

Property risk is managed through a highly diversified portfolio with a breakdown between different markets and because investments are made both in property-related securities and in directly owned properties.

The Insurance Group's exposure to spread risk is continuously monitored through defined limit structures and stress tests. Currency risk is managed through currency hedging using derivatives.

## **C.3 Credit risk**

Credit risk is the risk that a counterparty cannot fulfil its commitments. The risk can be split into issuer risk, which is defined as the risk that borrowers on the bond market cannot fulfil their obligations, counterparty risk and settlement risk.

Issue risk is defined as the risk that borrowers in the bond market cannot fulfil their obligations. The company's issue risk is governed by a rating-based limit model.

Counterparty risk in derivative contracts is the risk that a counterparty does not live up to its contractual obligations since the Company has a claim on the counterparty and the claim corresponds to a positive market value to the Company's advantage. Counterparty risk is limited by netting agreements where all positive and negative market values during a contract can be offset at counterparty level, and through standard agreements for managing collateral from counterparties for unrealized gains from the derivative market. Counterparty risk also arises through the reinsurance programs that are subscribed, and is limited by careful selection of counterparties, taking into account credit ratings, competence, experience, solvency and service level.

Settlement risk refers to the risk that a counterparty does not fulfil its obligation in connection with a transaction being matured, and that the price of the security has changed when the transaction must be changed with a new counterparty at a new price. This risk is a result of the fact that delivery and payment of securities are not always synchronized. The settlement risk is limited by, as far as possible, settling according to the Delivery Versus Payment (DVP) principle.

## **C.4            Liquidity risk**

Liquidity risk refers to the risk that the Insurance Group or any of its subsidiaries may find it difficult to fulfil its short-term financial obligations due to a lack of liquid assets.

Liquidity risk is managed through ongoing monitoring of future payments and through limits designed to maintain sufficient liquidity in the investment portfolios of each subsidiary.

In order to assess the assets' market liquidity, each asset class is classified based on market turnover, etc. The result is then compared with expected outflow of debt. In addition, hypothetical stress tests are performed with assumptions regarding unexpected outflow of debt and reduced asset disposal rates. Based on this, a liquidity quota can be prepared which is analysed in order to assess short-term payment ability.

The outcome of these liquidity analyses shows that the short-term payment ability is good.

## **C.5            Operational risk**

The Insurance Group's operational risks are primarily managed through a clearly distributed responsibility within each subsidiary for processes and internal controls as well as well-functioning system support (for more information, see section B.4 Internal Control System).

In addition, each subsidiary of the Insurance Group has implemented the following tools/processes for managing operational risks:

### **SEB Operational Risk Self-Assessment**

In order to identify operational risks where the risk management needs to be strengthened, regular evaluations and assessments are conducted at the process level.

### **Identification of operational risks associated with business planning**

As part of the business planning process, operational risks that potentially compromise the ability to achieve strategic and financial goals are identified and analysed.

### **Registration and follow-up of operational incidents**

All operational incidents are recorded in a central incident management system and analysed to understand the root cause and whether there is a need to strengthen the internal control structure or initiate other activities to reduce the risk of similar incidents occurring again.

### **New Product Approval Process (NPAP)**

The purpose of NPAP is to ensure that the business does not start activities that contain risks that cannot be managed and controlled in a professional and sustainable manner.

### **Business Continuity Planning**

Each subsidiary has plans and procedures to ensure preparedness associated with critical processes and systems in the event of large-scale interference. The purpose of these continuity plans is to restore operations as quickly and smoothly as possible.

The plans are tested and updated annually.

### **Crisis management**

Each subsidiary has appointed a crisis management with the task of, in the event of a crisis, quickly determine the scope, assessing the effects, identifying, prioritising and co-ordinating the actions that should be initiated.

### **Information Security**

There are appointed security officers within the Insurance Group with the task of monitoring the management of information security as well as raising awareness of the risks and how they are to be addressed. This role also participates in NPAP which evaluates all new initiatives.

Examples of routines implemented to handle information security risks are regular review of system permissions as well as selected log files.

### **Cyber Security**

The Insurance Group bases its work on cyber security in the following framework: "NIST Cyber security framework" and "ISF Cyber resilience framework". The goal is efficiently to prevent/handle negative outcomes in the event of cyber-attacks.

### **Compliance and legal risks**

The Compliance Function is responsible for informing and educating the business in terms of regulatory requirements and monitoring their handling (see section B.4).

In terms of the management of the Insurance Group's legal risks, these are co-ordinated and supervised by the Legal Department.

### **Follow-up and analysis of outstanding audit observations**

The Insurance Group has a process for the continuous monitoring and analysis of outstanding audit observations to mitigate the risks identified by internal and/or external auditors.

## **C.6 Other material risks**

In addition to the risks described in previous sections, the Insurance Group is exposed to business risks. Common to all identified business risks is that they may potentially adversely affect sales volumes or product margins.

Business risks are handled in the context of business planning and in the ongoing follow-up of the business.

Business planning is based on, among other things, competitor and world surveillance, analyses of developments in the insurance market and analysis of proposed changes in legislation and regulations and how these can affect the business. Alongside business planning, a forward assessment of the insurance group's risks and solvency situation is carried out as described above under the heading "Own Risk and Solvency Assessment" in Section B.3.

## **C.7 Any other information**

The Insurance Group's business is highly diversified and there is only limited concentration of risk. The concentration of risk that should be highlighted is that most of the Insurance Group's IT administration is outsourced to SEB AB, potentially causing all subsidiaries to suffer from central IT incidents and malfunctions.

## D Valuation for Solvency purposes

The Group's balance sheet has been prepared in accordance IASBs IFRS (International Financial Reporting Standards) by European Commission. Assets and liabilities have been revalued in the solvency balance sheet where Solvency II prescribes valuation rules other than IFRS and these are described in the following sections.

Gamla Liv is not consolidated in the solvency balance sheet. Gamla Liv is only included as shares in subsidiaries.

There have been no material changes in assumptions in the calculation of assets, technical provisions and other liabilities of the Insurance Group during the reporting period.

### D.1 Assets

The valuation principles and the differences between the valuation in IFRS and Solvency II are described below for each significant item in the solvency balance sheet. The Insurance Group's complete solvency balance sheet will be found in Appendix 1 (S.02.01.02).

#### Goodwill

Goodwill is valued according to the financial statements at acquisition value adjusted for accumulated impairment losses. According to Solvency II, goodwill is valued at zero and no value is reported in the solvency balance sheet.

#### Deferred acquisition cost

For occupational pension in Pension & Försäkring, valued under Solvency I, deferred acquisition cost (DAC) is reported under "Other" on the asset side and valued at the same value as in the financial statement. For other business DAC is valued at zero in the solvency balance sheet.

#### Intangible assets

Intangible assets are reported at amortised cost less accumulated amortisation and impairment losses according to the financial statements. Under Solvency II, intangible assets from subsidiary acquisitions are valued at zero.

#### Assets held for unit-linked and deposit insurance contracts

Assets held for unit-linked and deposit insurance agreements together constitute the securities portfolio that covers the policyholders' unit-linked and custody agreements. Assets include financial instruments, liquid assets and other financial assets and the valuation follows the same principles as described below.

#### Investment assets

##### Financial instruments

Financial instruments include listed and unlisted equities, fund units, interest-bearing securities and derivatives.

Assets are mostly market-listed assets, meaning that they are traded on an active market. An active market is a market with publicly available prices that represent actual market transactions. The assets traded on an active market are shares, fund units, bonds, derivatives and currencies.

For assets where there is no active market, different valuation techniques are used to estimate a fair value at the point of valuation that is deemed to correspond to the price at which a transaction between competent, independent parties can be implemented. Assets not traded on an active market are Private Equity and hedge funds and certain short-term interest rate instruments.

Fund units are valued at the net asset value, which is the rate at which transactions are made when trading units in the funds. Holdings in funds are reported to the Company's share of the valuation made by the fund manager of the fund's total holdings and is usually updated when new valuation has been obtained. Hedge funds are usually valued monthly or quarterly. Private Equity funds are valued quarterly. Other funds are valued daily.

Interest-bearing instruments traded on an active market are valued at fair value at the latest quoted buy rate or, if no such price, at the latest quoted transaction rate. Interest-bearing instruments that are not traded on an active market and where quoted prices are missing are valued after a present value calculation taking into consideration the market interest rates of comparable securities on the closing date.

Derivatives are valued at fair value. Derivatives with positive fair values are reported as investments while derivatives with negative fair values are reported as liabilities. Where there are listed courses, these are used. For non-listed derivatives, valuation is made through accepted theoretical models based on information about underlying instruments.

#### **Investment Properties**

Properties held for the purpose of generating rental income and/or value growth is reported as investment properties and is valued at fair value. Different forecasts on discounted cash-flow based on reliable estimates of future cash-flow are used for the valuation.

#### **Receivables under reinsurance contracts**

See section D.2. for differences in valuation between financial reporting and solvency II.

**Table D.1.1 shows the various asset classes and differences in the solvency and financial statements of the Insurance Group.**

| Per 31 December, 2018, SEK million   | Solvency       | Financial reporting | Difference    |
|--|----------------|---------------------|---------------|
| Goodwill   | 0              | 321                 | -321          |
| Deferred acquisition costs "DAC" *)  | 0              | 1,836               | -1,836        |
| Intangible assets  | 0              | 143                 | -143          |
| Deferred tax receivables   | 3              | 0                   | +3            |
| Tangible fixed assets held for own use   | 6              | 6                   | 0             |
| Investment assets (other than assets held for index and unit-linked contracts) **) | 26,944         | 26,965              | -21           |
| Assets held for index-regulated agreements and unit-linked insurance contracts     | 269,962        | 269,962             | 0             |
| Loans and mortgage loans   | 6              | 6                   | 0             |
| Receivables under reinsurance contracts  | 128            | 151                 | -23           |
| Insurance claims and receivables from intermediaries                               | 205            | 210                 | -5            |
| Reinsurance receivables  | 15             | 15                  | 0             |
| Receivables (accounts receivable, non-insurance)                                   | 16             | 16                  | 0             |
| Cash and cash equivalents  | 6,543          | 6,543               | 0             |
| Other  | 1,084          | 418                 | +666          |
| <b>Total assets</b>  | <b>304,912</b> | <b>306,592</b>      | <b>-1,680</b> |

\*) For occupational pension, valued according to Solvency I for the Swedish companies, DAC is reported at SEK 666 million under Other. DAC related to other businesses at SEK 1,170 million is valued at zero in the solvency balance sheet.

\*\*) The difference in investment assets in solvency and financial reporting is due to differences in the classification of derivatives between assets and liabilities. This is not difference in valuation.

**Table D.1.2 shows the change in the various assets classes according to Solvency during the reporting period.**

| Per 31 December, SEK million   | 2018           | 2017           | Change          |
|--|----------------|----------------|-----------------|
| Intangible assets  | 0              | 56             | -56             |
| Deferred tax receivables   | 3              | 10             | -7              |
| Tangible fixed assets held for own use   | 6              | 6              | 0               |
| Investment assets (other than assets held for index and unit-linked contracts) **) | 26,944         | 130,967        | -104,023        |
| Assets held for index-regulated agreements and unit-linked insurance contracts     | 269,962        | 347,365        | -77,405         |
| Loans and mortgage loans   | 6              | 3,486          | -3,480          |
| Receivables under reinsurance contracts  | 128            | 528            | -400            |
| Insurance claims and receivables from intermediaries                               | 205            | 231            | -26             |
| Reinsurance receivables  | 15             | 15             | 0               |
| Receivables (accounts receivable, non-insurance)                                   | 16             | 163            | -147            |
| Cash and cash equivalents  | 6,543          | 7,273          | -730            |
| Other  | 1,084          | 2,393          | -1,309          |
| <b>Total assets</b>  | <b>304,912</b> | <b>492,494</b> | <b>-187,582</b> |

The major changes are essentially an effect of the divestment of SEB Pension Denmark in 2018. Intangible assets have been written down to zero according to Solvency in 2018.

## D.2 Technical provisions

In this section, the valuation of technical provisions (TP) is defined for solvency purposes and how this differs from the financial reporting.

Table D.2.1 shows technical provisions within the Insurance Group broken down by lines of business (material class), including how these are allocated to different types of provisions: TP as a whole best estimate and risk margin.

**Table D.2.1 Technical provisions**

| <b>Per 31 December 2018,<br/>SEK million</b> | <b>TP calculated as<br/>a whole</b> | <b>Best<br/>estimate</b> | <b>Risk margin</b> | <b>TP</b>      |
|--|-------------------------------------|--------------------------|--------------------|----------------|
| Index-/unit-linked                           | 158,547                             | 107,273                  | 1,037              | 266,857        |
| With profit participation                    | 11,394                              | 8,573                    | 58                 | 20,026         |
| Other life                                   | 3                                   | -200                     | 47                 | -150           |
| Health similar to life                       | 1,104                               | 39                       | 39                 | 1,182          |
| Health similar to non-life                   | 0                                   | 249                      | 23                 | 272            |
| <b>Total</b>                                 | <b>171,049</b>                      | <b>115,934</b>           | <b>1,204</b>       | <b>288,187</b> |

| <b>Per 31 December 2017,<br/>SEK million</b> | <b>TP calculated as<br/>a whole</b> | <b>Best<br/>estimate</b> | <b>Risk margin</b> | <b>TP</b>      |
|--|-------------------------------------|--------------------------|--------------------|----------------|
| Index-/unit-linked                           | 203,794                             | 138,195                  | 1,082              | 343,071        |
| With profit participation                    | 10,272                              | 70,142                   | 231                | 80,645         |
| Other life                                   | 23                                  | 1,529                    | 107                | 1,659          |
| Health similar to life                       | 1,158                               | 4,034                    | 185                | 5,377          |
| Health similar to non-life                   | 0                                   | 272                      | 23                 | 295            |
| <b>Total</b>                                 | <b>215,247</b>                      | <b>214,172</b>           | <b>1,628</b>       | <b>431,047</b> |

For occupational pension, Pension & Försäkring has chosen to use transitional rules, which means that older rules in accordance with the Insurance Business Act (Solvency I) are used in the valuation of the technical provisions. In SEB Life Lithuania the asset values of the policyholders' fund units within unit-linked is reported as TP as a whole.

The best estimate corresponds to the probability weighted average of future cash-flows, taking account of the time value of money. All valuation of best estimate is based on mark to model techniques as there are no clear market values.

For the major part of with profit participation business in Pension & Försäkring and SEB Life Estonia, the estimated time value of financial options and guarantees (TVFOG) is added by using stochastic valuation. For that purpose, an Economic Scenario Generator has been used.

When calculating the risk margin, subsidiaries in the Insurance Group have used a simplified method in accordance with the Solvency II regulatory framework. As the main method, the Solvency Capital Requirement is calculated approximately for each future year by multiplying the initial Solvency Capital Requirement with the ratio between the best estimate for the coming

years and the initial best estimate while other methods have been used for some line of businesses where different types of risk factors have been used to calculate the Solvency Capital Requirement for coming years. When calculating the Solvency Capital Requirement for risk margin purposes, the market risk and counterparty risk (except for reinsurance) have been excluded, except for Life International, which has also included the market risk with the exception of interest rate risk.

The most important assumptions that influence the valuation of technical provisions are discount rates, lapse rates, cancellations, mortality rates, expense assumptions and management actions related to the pay-out of future discretionary bonuses.

## Uncertainties in the valuation

The uncertainty in the valuation of the technical provisions is related to the extent to which future cash-flows can be estimated and whether the data used in the calculation cannot be considered complete, accurate and appropriate. Due to the uncertainty about future events, the modelling of future cash-flows will necessarily be incomplete, leading to a certain degree of error and ambiguity in the valuation.

The valuation of best estimate is based on different cash-flow models with a large number of different assumptions about parameters, which generally is derived from historical data. These assumptions contain uncertainties that may have a non-significant deviation from future outcomes.

In particular there is uncertainty in:

- Policyholders' behaviour regarding the exercise of contractual rights to change the agreement
- Assumptions of cost
- Changes in demographic, legal, medical, technical, social and economic development
- Times, frequency and extent of injury events, including uncertainty in injury inflation

The level of sufficient level of detail should also be continuously assessed.

## The difference between valuation methods for financial reporting and Solvency

Tables D.2.2 shows the differences between the valuation of technical provisions for solvency purposes and those used in the financial statements for each business area excluding Gamla Liv.

**Table D.2.2. Technical provisions**

| Per 31 December 2018<br>SEK million      | TP<br>Solvency | TP<br>Financial<br>reporting | Difference     |
|--|----------------|------------------------------|----------------|
| Index-/unit-linked                       | 266,857        | 270,546                      | - 3,689        |
| With profit participation and other life | 19,875         | 20,023                       | - 147          |
| Health similar to life                   | 1,182          | 1,209                        | - 27           |
| Health similar to non-life               | 272            | 315                          | - 43           |
| <b>Total</b>                             | <b>288,187</b> | <b>292,093</b>               | <b>- 3,906</b> |

The difference is primarily attributable to future profits being recognised in the Solvency Valuation, thereby reducing the technical provisions as compared to those in the financial reporting. This is in turn an effect of the present value of future expected expenses being lower than the corresponding present value of future expected fees.

Other differences relate to the risk margin being added to Solvency valuation.

The Insurance Group does not use the following adjustments or transitional rules:

- Matching adjustment or volatility adjustment in accordance with Article 77b respective 77d of Solvency II Directive 2009/138 / EC.
- Transitional rules for risk-free interest rates in accordance with Article 308c of Solvency II Directive 2009/138 / EC.
- Transitional rules for technical provisions in accordance with Article 308d of Solvency II Directive 2009/138 / EC.

**Table D.2.3. Change of technical provisions Solvency during the reporting period**

| <b>Solvency TP<br/>SEK million</b>       | <b>2018</b>    | <b>2017</b>    | <b>Difference</b> |
|--|----------------|----------------|-------------------|
| Index-/unit-linked                       | 266,857        | 343,071        | - 76,214          |
| With profit participation and other life | 19,875         | 82,304         | - 62,428          |
| Health similar to life                   | 1,182          | 5,377          | - 4,195           |
| Health similar to non-life               | 272            | 295            | - 23              |
| <b>Total</b>                             | <b>288,187</b> | <b>431,047</b> | <b>-142,861</b>   |

The decrease in technical provisions is mainly attributable to the divestment of SEB Pension Denmark but also within unit-linked and index-linked insurance as a result of negative changes in value of the underlying market assets.

## Valuation of reinsurance recoverables under reinsurance contracts

Tables D.2.4. shows reinsurance recoverables (RR) separately for each line of business.

| <b>SEK million</b>                       | <b>RR<br/>Solvency</b> | <b>RR<br/>Financial<br/>reporting</b> | <b>Difference</b> |
|--|------------------------|---------------------------------------|-------------------|
| Index-/unit-linked                       | -15.9                  | 8.0                                   | -23.9             |
| With profit participation and other life | 7.4                    | 2.0                                   | 5.4               |
| Health similar to life                   | 138.9                  | 140.1                                 | -1.2              |
| Health similar to non-life               | -2.2                   | 0.7                                   | -3.0              |
| <b>Total</b>                             | <b>128.1</b>           | <b>150.9</b>                          | <b>-22.7</b>      |

The difference to the financial reporting primarily relates to the fact that future cash-flows are to a greater extent included in the Solvency Valuation. In addition, the premium of waiver component for unit-linked insurance in Pension & Försäkring in the financial reporting has been segmented to health insurance similar to life insurance in Solvency.

## D.3 Other liabilities

Other liabilities have been valued in accordance with IFRS and subsequently adjusted according to Solvency II requirements. Below describes the valuation principles and the differences against the solvency valuation of the essential items.

### Provisions other than technical provisions

Provisions other than technical provisions relate to deferred front-end fees in SEB Life International. The difference to the financial statement is that prepaid fees from customers are excluded in solvency reporting.

### Deferred tax liabilities

Deferred tax liabilities refer to temporary differences between the reported values of assets and liabilities according to the financial reporting and the values used as tax base, with the addition of adjustment between IFRS and Solvency II.

**Table D.3.1. Deferred tax liabilities**

| Per 31 Dec 2018, SEK million          | Financial reporting | Revaluation Solvency | Solvency   | Matures  |
|---------------------------------------|---------------------|----------------------|------------|----------|
| <b>Tax effect of revaluations:</b>    |                     |                      |            |          |
| Technical provisions, net             | 0                   | 177                  | 177        | -        |
| <b>Total deferred tax liabilities</b> | <b>0</b>            | <b>177</b>           | <b>177</b> | <b>-</b> |

### Derivatives

Derivatives with negative market values are reported as a liability and valued at fair value according to the same principles as for derivatives with positive market values.

### Subordinated liabilities

Subordinated liabilities are subordinated loan from SEB and valued at nominal value.

### Other liabilities

Other liabilities include non-cash-settled securities transactions, accounts payables and other liabilities. At the first reporting date, the liabilities are valued at fair value including transaction costs. After the first reporting date, the liabilities are valued at accrued acquisition value including transaction costs using the effective interest rate method. Table D.3.2 shows the difference between financial reporting and Solvency for other liabilities for the Insurance Group.

**Table D.3.2 Other liabilities**

| Per 31 December 2018, SEK million                                   | Solvency     | Financial reporting | Difference  |
|---|--------------|---------------------|-------------|
| Provisions other than technical provisions                          | 195          | 962                 | -767        |
| Deferred tax liabilities  | 177          | 0                   | +177        |
| Derivatives   | 1,250        | 1,264               | -14         |
| Financial liabilities other than liabilities to credit institutions | 203          | 203                 | 0           |
| Insurance liabilities and liabilities to intermediaries             | 254          | 254                 | 0           |
| Reinsurance liabilities   | 10           | 10                  | 0           |
| Liabilities (accounts payables, non-insurance)                      | 107          | 107                 | 0           |
| Subordinated liabilities  | 1,200        | 1,200               | 0           |
| Other liabilities not shown elsewhere                               | 2,737        | 2,737               | 0           |
| <b>Sum other liabilities</b>  | <b>6,133</b> | <b>6,737</b>        | <b>-604</b> |

The difference in derivatives in solvency and financial reporting is not due to differences in valuation differences but in the classification between assets and liabilities.

The table below shows the change in other liabilities in the solvency balance sheet during the reporting period

**Table D.3.3 Change in other liabilities during reporting period**

| <b>Per 31 December, SEK million</b>                                 | <b>2018</b>  | <b>2017</b>   | <b>Difference</b> |
|---|--------------|---------------|-------------------|
| Provisions other than technical provisions                          | 195          | 409           | -214              |
| Deferred tax liabilities  | 177          | 919           | -742              |
| Derivatives   | 1,250        | 27,850        | -26,600           |
| Financial liabilities other than liabilities to credit institutions | 203          | 478           | -275              |
| Insurance liabilities and liabilities to intermediaries             | 254          | 302           | -48               |
| Reinsurance liabilities   | 10           | 310           | -300              |
| Liabilities (accounts payables, non-insurance)                      | 107          | 8,551         | -8,444            |
| Subordinated liabilities  | 1,200        | 2,575         | -1,375            |
| Other liabilities not shown elsewhere                               | 2,737        | 6,074         | -3,336            |
| <b>Sum all other liabilities</b>                                    | <b>6,133</b> | <b>47,468</b> | <b>-41,334</b>    |

The change in derivatives is essentially an effect of the divestment of SEB Pension Denmark in 2018.

## **D.4 Alternative methods for valuation**

To used alternative valuation methods, see the description of the various asset classes in section D1.

## **D.5 Any other information**

The insurance group has no other material information to provide regarding valuation for solvency purposes.

# E Capital Management

## E.1 Own Funds

### Capital management

The capital management is described and illustrated in section B.3 “Risk management system including own risk and solvency assessment (ORSA)”. The aim of ORSA is to analyse the Insurance Group’s business plan from a perspective of risk to ensure that all significant risks associated with the proposed strategy are identified and evaluated. The ORSA process is also the main tool for the Board and the management to determine if identified risks are acceptable and manageable in view of the Group’s capital strength and overall risk management capability, or whether measures are needed to balance the risk in relation to available capital resources.

The outcome of the 2018 ORSA process shows that the Insurance Group is financially strong and well capitalised in relation to its risk exposure and capital requirements. This conclusion is based on the analysis of the Insurance Group’s risk profile and forward-looking financial forecasts for the Solvency Position of the Insurance Group in four different scenarios:

- A baseline scenario with assumptions in line with the Insurance Group’s business plan
- Three negative scenarios based on the risks identified in the Insurance Group’s business environment and potential downturns in the macroeconomic environment

### Own Funds components and levels (Tiers)

**Table E.1.1 shows the bridge from equity in the financial statement to available Own Funds in accordance with the solvency rules.**

| SEK million  | 31 Dec 2018   | 31 Dec 2017   |
|--|---------------|---------------|
| <b>Shareholders’ equity according to the Group’s financial reporting</b>     | <b>7,735</b>  | <b>9,999</b>  |
| Intangible assets from acquisition of subsidiaries and goodwill are excluded | -321          | -471          |
| Deferred acquisition costs are excluded *                                    | -1,170        | -1,963        |
| Technical provisions are valued lower  | +3,732        | +6,487        |
| Other provisions are valued lower  | +767          | +601          |
| Deferred tax liabilities are valued higher                                   | -177          | -684          |
| Reinsurance recoverables are valued lower                                    | -23           | -23           |
| Subordinated liabilities are included  | +1,200        | +2,575        |
| Foreseeable dividend   | -1,500        | -2,000        |
| Other adjustments  | +50           | +34           |
| <b>Own Funds according to the solvency rules, excluding Gamla Liv</b>        | <b>10,293</b> | <b>14,555</b> |

\* Deferred acquisition costs related to the Occupational Pensions Directive are still included by SEK 666 million as at 31 Dec 2018 and at SEK 1,995 million as at 31 Dec 2017.

The main difference between equity in the financial statements and Own Funds in Solvency reporting is the effect of revaluation of technical provisions. Provisions are lower in Solvency reporting as they are reduced by expected future fees from existing customers. Other provisions

are valued lower as the part relating to prepaid fees (deferred front end fees) within SEB Life International is excluded from the solvency reporting. Because the technical provisions are valued lower, additional deferred tax liabilities are calculated.

Other major differences are that deferred acquisition costs (except the part attributable to the Occupational Pensions Directive), intangible assets and goodwill from acquisition of subsidiaries are excluded while subordinated liabilities in the form of subordinated loans are included. Finally, Own Funds are reduced with foreseeable dividend of profits from the reporting period.

**Table E.1.2a shows the available Own Funds breakdown into tiers under the solvency rules.**

| Tier, SEK million                                 | Own Funds item   | 31 Dec 2018   | 31 Jan 2017   |
|---|--|---------------|---------------|
| Basic own funds Tier 1, unrestricted              | Share capital  | 120           | 120           |
|   | Share premium reserve  | 24            | 24            |
|   | Reconciliation reserve   | 4,396         | 11,836        |
|   | Other items approved by supervisory authority as basic own funds not specified above | 4,553         | -             |
| <b>Total basic own funds Tier 1, unrestricted</b> |  | <b>9,093</b>  | <b>11,980</b> |
| Basic own funds Tier 1, restricted                | Subordinated liabilities   | -             | -             |
| Basic own funds Tier 2                            | Subordinated liabilities   | 1,200         | 2,575         |
| Basic own funds Tier 3                            | Deferred tax assets  | -             | -             |
| <b>Own funds excluding Gamla Liv</b>              | <b>Available own funds</b>   | <b>10,293</b> | <b>14,555</b> |
| Eligible own funds Gamla Liv                      | Mainly bonus potential to policyholders  | 31,721        | 36,250        |
| <b>Total own funds including Gamla Liv</b>        | <b>Available own funds</b>   | <b>42,013</b> | <b>50,805</b> |

The Insurance Group's Own Funds consist of the share capital, share premium reserve, retained earnings (reconciliation reserve) tier 1, other items approved by supervisory authority as basic Own Funds not specified above and subordinated liabilities (subordinated loan) tier 2. In 2018, the subordinated loan from SEB was repaid by SEK 2,575 million, while a new subordinated loan was raised by SEK 1,200 million.

A change in the composition of the Own Funds compared to 2017 is that the surplus within occupational pension is reported on the line "Other items approved by supervisory authority as basic Own Funds not specified above" according to transition rules for occupational pension. In 2017, the surplus was included in the reconciliation reserve.

The reconciliation reserve is directly available for loss coverage.

**Table E.1.2b Specification of the reconciliation reserve's composition**

| SEK million   | 31 Dec 2018   | 31 Dec 2017   |
|---|---------------|---------------|
| Equity other than share capital and share premium reserve | 7,618         | 9,882         |
| Foreseeable dividend                                      | -1,500        | -2,000        |
| Difference in valuation of technical provisions           | 3,906         | 6,487         |
| Deduct surplus from occupational pension                  | -4,553        | -             |
| <b>Reassessment of other items</b>                        | <b>-1,076</b> | <b>-2,534</b> |
| <b>Total</b>  | <b>4,396</b>  | <b>11,836</b> |

Gamla Liv is owned at 99.6% but is operated under mutual principles where no profit distribution to shareholders is allowed but all surpluses are attributed to the policyholders. Gamla Liv is therefore not consolidated in the financial reporting. When the Solvency Capital Requirement for the Insurance Group is calculated, the authorities require the company to be included. Therefore, when the Own Funds is calculated to meet the requirement, Gamla Liv is included according to the deduction and aggregation (D&A) method (alternative consolidation method 2). The method means that an amount corresponding to Gamla Liv's capital requirements is included in the Insurance Group's Own Funds. If the Own Funds were below the requirement, the lower amount would be included.

The Insurance Group's total Own Funds at the end of the reporting period amounted to SEK 10,293 (14,555) million. SEK 9,093 (11,980) million of Own Funds is Tier 1 capital unrestricted and SEK 1,200 (2,575) is Tier 2 capital.

**Table E.1.3 Change in Own Funds**

| SEK million  | Excluding<br>Gamla Liv | Including<br>Gamla Liv |
|--|------------------------|------------------------|
| <b>Own funds 31 December 2017</b>  | <b>14,555</b>          | <b>50,805</b>          |
| <b>Profit after tax according to the Group's financial reporting</b>                                   | <b>5,348</b>           |                        |

| Ordinary share dividend paid to the shareholder  | -5,500                 |                        |
| Change in foreseeable dividend to the shareholder  | 500                    |                        |
| Repayment of subordinated loan to the shareholder, net   | -1,375                 |                        |
| Group contribution from the owner  | 113                    |                        |
| Other (mainly currency revaluation of equity in foreign subsidiaries)                                  | -199                   |                        |
| <b>Change in the Own funds during the year excluding Gamla Liv</b>                                     | <b>-4,262</b>          | <b>-4,262</b>          |
| <b>Change of SCR in Gamla Liv which is included in the Insurance group's Own funds during the year</b> | <b>-</b>               | <b>-4,529</b>          |
| <b>Own funds 31 December 2018</b>  | <b>10,293</b>          | <b>42,013</b>          |

\*other than impairment effect of deferred acquisition costs

During the year total Own Funds including Gamla Liv has decreased by SEK 8,792 million. The capital related to Gamla Liv decreased during the year by SEK 4,529 million due to decreased capital requirements for this company (lower equity risk due to falling equity markets). Own Funds excluding Gamla Liv has decreased by SEK 4,262 million during the year. The decrease is mainly due to the impairment of deferred acquisition costs (according to IFRS 15), other valuation differences between solvency and financial reporting have decreased and the subordinated loan has been repaid and a new loan has been raised at lower amount. As a result of the divestment gain from the sale of the Danish subsidiaries, the Company's dividend has increased by a corresponding amount to SEK 5,500 million in total which approximately corresponds to the profit for the year.

## Own Funds in relation to capital requirements

The Solvency Capital Requirement excluding Gamla Liv amounted to SEK 4,503 (6,984) million at the end of the period, which means that the solvency ratio was 2.29 (2.08). At the same time, the capital requirement including Gamla Liv was SEK 36,224 (43,234) million which gives a ratio of 1.16 (1.18). The Solvency Capital Requirement is described in more detail in Section E2.

## E.2 Solvency Capital Requirement and Minimum Capital Requirement

As of 31 December, 2018, the Solvency Capital Requirement of the Insurance Group excluding Gamla Liv amounted to SEK 4,503 (6,984) million and SEK 36,224 (43,234) million including Gamla Liv.

### Solvency Capital Requirement broken down by risk modules

Table E.2.1 shows Solvency Capital Requirement broken down by risk module.

| SEK million  | 31 Dec 2018   | 31 Dec 2017   |
|--|---------------|---------------|
| Market risk  | 3,428         | 11,765        |
| Counterparty risk  | 471           | 897           |
| Underwriting risk for life insurance   | 2,055         | 3,804         |
| Underwriting risk for health insurance   | 153           | 465           |
| Underwriting risk for accident insurance   | -             | -             |
| Diversification  | -1,471        | -3,253        |
| Intangible asset risk  | 0             | 11            |
| <b>Primary Solvency Capital Requirement</b>  | <b>4,635</b>  | <b>13,689</b> |
| Operational risks  | 180           | 479           |
| Loss absorption capacity of technical provisions   | -886          | -7,566        |
| Loss absorption capacity in deferred taxes   | -139          | -288          |
| Capital requirements for business carried out in accordance with Article 4 of Directive 2003/41 / EC | 713           | 670           |
| <b>Solvency Capital Requirements</b>   | <b>4,503</b>  | <b>6,984</b>  |
| Solvency Capital Requirements for Gamla Liv  | 31,721        | 36,250        |
| <b>Solvency Capital Requirements including Gamla Liv</b>   | <b>36,224</b> | <b>43,234</b> |

Pension & Försäkring and Gamla Liv have chosen to apply transitional rules for its occupational pension business, which means that older provisions of the Insurance Business Act (Solvency 1)

are used in determining Solvency Capital Requirements. These are reported as “Capital requirements for business carried out in accordance with Article 4 of Directive 2003/41 / EC”

The Insurance Group uses a combination of the consolidation method (Method 1 under Articles 230-232 of the Solvency II Directive) and the aggregation and settlement method (Method 2 under Article 233 of Solvency II Directive). The combination means that Gamla Liv is included with the combination and aggregation method in the calculation of the Group-based Solvency Capital Requirement and the Own Funds, while the consolidation method is used for the Insurance Group in general.

The Solvency Capital Requirement for the Insurance Group calculated according to Method 1 amounts to SEK 4,503 (6,984) million.

### Standard formula and the use of simplifications

The calculation of the Solvency Capital Requirement for the Insurance Group uses the standard formula for all risk modules. Simplified calculations of the standard formula are used to a limited extent in the risk modules counterparty risk, life insurance risk and health insurance risk.

### Minimum Capital Requirements

Minimum Capital Requirements are only calculated at the subsidiary level and not at the group level, but for information it may be mentioned that the Solvency Capital Requirement for the Insurance Group exceeds the sum of the Minimum Capital Requirements of the subsidiaries SEK 2,833 (2,646) excluding Gamla Liv.

### Material changes in the Solvency Capital Requirement

Table E.2.2 shows the change in the Solvency Capital Requirement over the reporting period.

| SEK million  | 31 Dec<br>2018 | 31 Dec<br>2017 | Change        | Change<br>% |
|--|----------------|----------------|---------------|-------------|
| <b>Solvency Capital Requirements</b>                     | <b>4,503</b>   | <b>6,984</b>   | <b>-2,481</b> | <b>-36</b>  |
| Solvency Capital Requirements for Gamla Liv              | 31,721         | 36,250         | -4,529        | -12         |
| <b>Solvency Capital Requirements including Gamla Liv</b> | <b>36,224</b>  | <b>43,234</b>  | <b>-7,010</b> | <b>-16</b>  |

The Insurance Group’s Solvency Capital Requirement excluding Gamla Liv has decreased by SEK 2,481 million or 36 percent. The decrease in the Solvency Capital Requirement has been affected by the divestment of SEB Pension Denmark during the year. At the end of 2017, the capital requirement for this company was SEK 1,780 million.

The other decrease of SEK 701 million is mainly attributable to lower capital requirements for equity risk as a result of falling market values in equity-related assets. The Solvency Capital Requirement including Gamla Liv has decreased by SEK 7,010 million or 16 percent. The decrease for Gamla Liv is almost exclusively attributable to decreased Solvency Capital Requirements for market risk (mainly equity risks).

**E.3 Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement**

The Insurance Group does not apply duration-based equity risk when calculating the Solvency Capital Requirement.

**E.4 Differences between the standard formula and any internal model used**

The insurance group only uses the standard formula.

**E.5 Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement**

The Insurance Group has met the capital requirements throughout the reporting period.

**E.6 Any other information**

The Insurance Group does not use any company specific parameters.

# Appendix 1 Templates
