Item to the Annual General Meeting 2024 of SE Bank

I hereby request that SE-Bank corrects the software in its central computers, so that the software at each payment checks that the payment does not exceed the customer's own previous maximum payment by more than 50%.

Prior to the start of the new system, the customers' maximum values can be set at approximately SEK 5,000 after a previous calculation period of two months. If a payment exceeds this maximum value, the payment shall be charged to the customer, but quarantined by the Bank for two business days, as long as the customer does not authorize the payment after the Bank's control by telephone.

This means a certain amount of work for the Bank, but since our banks should keep the security of their customers in mind, this new way of working with security pays off...

I will therefore bring up this new way of working at the general meetings in 2024 at almost all 4 major banks, except for Nordea, as they live and pay taxes in Finland and thus lack important opportunities for the owners to influence Nordea's morale. Nordea will be happy about this.

I have stolen the idea from a post on "RingP1" at Swedish Radio.

Best regards,

Carl Axel Bruno
